## **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: The prior art does not provide for, nor suggests providing for, predicting an optimum transmission frame length by basing this length by a bit error rate and the length of a previous transmission, measuring a new bit error rate and a processing noise and calculating an optimum length of the frame. The frame is then adjusted and transmitted. The processing noise is measured as a signal to noise ratio. Using this method the Quality of Service can be maintained, even though the channel quality is dramatically changing. A Kalman filter is used to assess the quality of the transmission, since this filter does not require the maintenance of all previous values the use of the Kalman filter requires the use of a recursive assessment of the channel quality in the communication link. The assessment is made by assessing the bit error rate and basing the predicted optimum frame size on the feedback that such an assessment provides. The closest prior art of record is Webster, however Webster does not disclose adjusting the frame length based on a bit error rate and an optimum frame length of both a previous and current transmission frame in conjunction with an assessed random processing noise, rather Webster adjusts the frame length based on a ratio of the number of frames sent and the number of frames lost, e.g. the number of frames retransmitted. For these reasons, in conjunction with the other limitations of the independent claims, put this case in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably Application/Control Number: 10/074,803 Page 3

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph E. Avellino whose telephone number is (571) 272-3905. The examiner can normally be reached on Monday-Friday 7:00-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David A. Wiley can be reached on (571) 272-3923. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
